

# Handover — Quick Card

Passing an inspection to the next person, without losing it

App v1.4 · Form 4.2

## ONE BATON, NEVER A COPY

One file is the live record. It lives in SharePoint. Your device copy is a scratch pad.

EVERY HANDOVER — FOUR STEPS, IN THIS ORDER

1

### Set your stage and your name

At the top of the inspection. This is what stamps the filename and the audit trail.

2

### Tap “Hand over through SharePoint”

Top of the form. It files the record into current/ and archives the old one for you.

3

### Tell the next person

Send a LINK to the folder — never the file itself.

4

### Then delete your device copy

Once they confirm they have it. The app will not do this for you.

Picking a job up: “Take over an inspection from SharePoint” — home screen.

No signal? The buttons marked “offline fallback” work the old way — then the filing is yours.

Skipping the last step is how one job ends up being edited in two places.

CLOSED

Change the stage BEFORE you hand over — it is what names the file.

WHERE IT LIVES — ONE FOLDER PER INSPECTION

Site Inspections ■ INS-2026-0142 - Smith - 12 Marine Pde, Kirra/

|          |                                               |
|----------|-----------------------------------------------|
| current/ | one file, ever – the live record              |
| archive/ | every past handover                           |
| wip/     | auto-backups while you work – NEVER the baton |
| photos/  | the app puts these here by itself             |

Two files in current/ means something has gone wrong.

THE FILE NAMES ITSELF
