

HANDOVER — QUICK CARD

Passing an inspection to the next person, without losing App v1.3 · Form 4.2

ONE BATON, NEVER A COPY

One file is the live record. It lives in SharePoint. Your device copy is a scratch

EVERY HANDOVER — FIVE STEPS, IN THIS ORDER

- 1** Set your stage and your name
At the top of the inspection. This is what stamps the filename and the au
- 2** Tap “Share draft”
At the foot of the form. The app names the file for you — do not rename
- 3** Upload it into current/
The inspection’s own folder in the Site Inspections library.
- 4** Move the previous file into archive/
Straight away — so current/ holds exactly one file again.
- 5** Then delete your device copy
Only after steps 3 and 4. Send a LINK to the folder — never the file itself

Skipping step 5 is how one job ends up being edited in two places.

WHO HOLDS IT NEXT

OFFICE FIELD TECH SALES ADMIN CLOSED

Change the stage BEFORE you export — it is what names the file.

WHERE IT LIVES — ONE FOLDER PER INSPECTION

Site Inspections ■ INS-2026-0142 - Smith - 12 Marine Pde, Kirra/
current/ one file, ever — the live record
archive/ every past handover
photos/ the app puts these here by itself

Two files in current/ means something has gone wrong.

THE FILE NAMES ITSELF
