

TAKE PHOTOS IN THE CAMERA APP, NOT IN THE FORM

Then attach them. Your camera roll keeps a second copy, and location details

ON SITE — NO SIGNAL NEEDED

- 1 Photograph what you need, using the Camera app
Take as many as you like. Nothing is uploading yet, so nothing is waiting
- 2 Attach them to the right field in the form
Tap the upload box in that section and pick them from your Photo Library

BACK IN SIGNAL — CAR, OFFICE OR WIFI

- 3 Sign in, once
Home screen → Sign in. Use your Dryspace Microsoft account. It remembers
- 4 Tap “Upload now”
The home screen tells you how many files are waiting. Leave it running
- 5 Check it says “All photos uploaded”
That is your confirmation. Until it does, the photos exist only on your device

WHAT THE APP DOES BY ITSELF

Keeps a full-quality original for evidence, plus a smaller copy so reports stay small
Names every file by job, date and which part of the form it came from.

Files them into the inspection’s own photos/ folder — you never choose a location

Reads every upload back and checks it arrived complete before counting it as done

IF SOMETHING LOOKS WRONG

- | | |
|------------------------|--|
| “No connection” | Normal in a basement. Try again when you have signal. |
| “Please sign in again” | Tap Sign in. Nothing is lost — the photos are still on the device |
| “Need attention” | Tap Try again. If it repeats, tell the office before deleting anything |

Never delete an inspection until the home screen says all photos are uploaded.
