

HANDOVER — QUICK CARD

Passing an inspection to the next person, without losing it

App v1.3 · Form 4.2

ONE BATON, NEVER A COPY

One file is the live record. It lives in SharePoint. Your device copy is a scratch pad.

EVERY HANDOVER — FIVE STEPS, IN THIS ORDER

- 1

Set your stage and your name

At the top of the inspection. This is what stamps the filename and the audit trail.
- 2

Tap “Share draft”

At the foot of the form. The app names the file for you — do not rename it.
- 3

Upload it into current/

The inspection’s own folder in the Site Inspections library.
- 4

Move the previous file into archive/

Straight away — so current/ holds exactly one file again.
- 5

Then delete your device copy

Only after steps 3 and 4. Send a LINK to the folder — never the file itself.

Skipping step 5 is how one job ends up being edited in two places.

WHO HOLDS IT NEXT

OFFICE

FIELD

TECH

SALES

ADMIN

CLOSED

Change the stage BEFORE you export — it is what names the file.

WHERE IT LIVES — ONE FOLDER PER INSPECTION

Site Inspections ■ INS-2026-0142 - Smith - 12 Marine Pde, Kirra/

current/

one file, ever – the live record

archive/

every past handover

photos/

the app puts these here by itself

Two files in current/ means something has gone wrong.

THE FILE NAMES ITSELF
